

Have you heard of Kawasaki disease?

**Did you know that Kawasaki disease
is the leading cause of
acquired heart disease in children?**

**Every year, about 550 children in Canada will be
diagnosed with Kawasaki disease.**

**Early detection is CRITICAL!
Treatment within 10 days of the onset of fever can
dramatically reduce the chances of
lifelong heart damage.**

**Ask a doctor about Kawasaki disease
if FEVER lasts for 5 days or more.**

Together, we can save a child's heart!
